

GENESIS AI ENGINEERING HANDBOOK

SPRINT 1B – DELIVERABLE EF-01

BUSINESS REQUIREMENTS SPECIFICATION (BRS)

Project: Genesis AI

Product: Genesis Product Factory

Document Version: 1.0

Status: Draft

Owner: Founder (Divya)

Technical Owner: AI CTO (ChatGPT)

1. Executive Summary

Genesis AI is an AI-native business platform that enables a founder to build, launch, manage and improve product businesses using specialized AI employees.

Unlike conventional AI tools that generate isolated outputs, Genesis coordinates a workforce of AI employees that operate as departments within a digital company.

The first implementation of this vision is Genesis Product Factory.

2. Business Problem

Launching a successful business requires expertise across multiple disciplines:

- Market Research
- Product Planning
- Graphic Design
- Branding
- Copywriting
- SEO
- Social Media
- Publishing
- Analytics

A solo founder rarely possesses enough time or expertise to execute each discipline consistently.

This creates:

- Slow execution
- Poor product quality

- Missed opportunities
- Decision fatigue
- High operating costs

Genesis exists to eliminate these problems.

3. Business Vision

Genesis becomes a digital workforce capable of performing operational business activities while the founder remains responsible for strategic decisions.

Genesis should eventually become capable of operating multiple businesses simultaneously.

4. Business Objectives

Short-Term Objectives (0–6 Months)

- Build Genesis Product Factory MVP.
 - Validate one profitable niche.
 - Produce production-ready assets.
 - Standardize business workflows.
 - Reduce product creation effort.
-

Medium-Term Objectives (6–18 Months)

- Automate product generation.
 - Automate publishing.
 - Support multiple brands.
 - Build reusable AI employees.
 - Introduce analytics-driven recommendations.
-

Long-Term Objectives (18+ Months)

Transform Genesis into a Business Operating System capable of operating multiple independent businesses.

5. Business Scope

Included

Market Research

Business Validation

Product Planning

Creative Planning

Marketing Preparation

Publishing Preparation

Business Analytics

Knowledge Management

Excluded (Current Phase)

Customer Support

Accounting

Inventory Management

HR

Payroll

Manufacturing

Legal Automation

6. Stakeholders

Founder

Strategic decision maker.

Responsibilities

Business Vision

Approval

Funding

Final Decisions

Genesis AI

Operational execution.

Responsibilities

Research

Planning

Creation

Reporting

Learning

Customers

Purchase products created by Genesis businesses.

Vendors

Provide production services.

Examples

Qikink

Future POD providers

Packaging suppliers

Marketplace providers

7. Business Capabilities

Genesis must support the following capabilities.

Business Discovery

↓

Market Research

↓

Business Validation

↓

Product Planning

↓

Creative Development

↓

Marketing Preparation

↓

Publishing

↓

Performance Measurement

↓

Continuous Improvement

8. Business Rules

BR-001

Research must precede product creation.

BR-002

No product may enter production without business validation.

BR-003

Every department produces documented outputs.

BR-004

Every strategic decision requires Founder approval.

BR-005

Operational decisions are delegated to Genesis.

BR-006

Every workflow is version controlled.

BR-007

Historical information is never deleted.

BR-008

Every AI employee has a single responsibility.

BR-009

Departments communicate only through standardized reports.

BR-010

No department modifies another department's approved outputs.

9. Business Processes

Primary Business Process

Idea

↓

Research

↓

Validation

↓

Approval

↓

Planning

↓

Creative

↓

Marketing

↓

Publishing

↓

Analytics

↓

Learning

Secondary processes include:

Brand Creation

Knowledge Management

Prompt Management

Documentation

Architecture Review

Version Management

10. Success Metrics

Business Success

Products launched

Profitable products

Launch speed

Manual effort reduction

Business scalability

Operational Success

Department completion rate

Employee accuracy

Approval rate

Documentation quality

Workflow completion time

Customer Success

Conversion rate

Customer satisfaction

Repeat purchases

Return rate

Average Order Value

11. Constraints

Current Constraints

ChatGPT Plus only

No VPS

No Supabase

No Meta API

No Cloudflare R2

No OpenAI API credits

Architecture must function under these constraints.

12. Assumptions

Founder reviews strategic outputs.

Manual publishing remains acceptable during MVP.

AI quality improves through structured workflows.

Business processes remain modular.

Future automation will replace manual execution.

13. Risks

Business Risk

Poor niche selection

Mitigation

Research-first workflow

Technical Risk

Platform dependency

Mitigation

Provider-independent architecture

Operational Risk

Poor documentation

Mitigation

AI Risk

Hallucinated recommendations

Mitigation

Structured reports

Founder approval

Evidence-first philosophy

Marketplace Risk

Policy changes

Mitigation

Multi-provider architecture

14. Dependencies

Genesis Constitution

Product Factory PRD

Department Specifications

Employee Specifications

Architecture Specification

Database Specification

No implementation may begin until these documents are approved.

15. Non-Business Goals

Genesis is NOT intended to:

Replace founders

Make autonomous financial decisions

Operate without governance

Ignore legal or marketplace requirements

Replace human creativity entirely

16. Business KPIs

Target Time

Research Completion

<10 minutes (future automation)

Product Planning

<5 minutes

Creative Planning

<10 minutes

Marketing Pack

<5 minutes

Founder Review Package

<30 minutes end-to-end

(Current MVP timings may be longer.)

17. Return on Investment (ROI)

Expected Benefits

Reduced operational effort

Reduced outsourcing costs

Faster business launches

Higher consistency

Knowledge reuse

Scalable operations

Improved business quality

18. Business Acceptance Criteria

Genesis Product Factory is considered business-ready when:

- ✓ Business opportunities can be evaluated consistently.
 - ✓ Product planning follows standardized workflows.
 - ✓ Creative outputs follow brand standards.
 - ✓ Marketing assets are generated automatically.
 - ✓ Founder receives a complete launch package.
 - ✓ Every workflow is documented and repeatable.
-

19. Future Business Expansion

Genesis architecture shall support future businesses including:

Digital Products

SaaS

Educational Products

Subscriptions

Rental Businesses

Manufacturing

Wholesale

Physical Retail

Service Businesses

The Product Factory is the first business engine, not the final destination.

20. Business Requirement Traceability

Every business requirement shall map to:

Functional Requirements

↓

Department Responsibility

↓

AI Employee

↓

Database Entity

↓

Technical Component

↓

Sprint Deliverable

No requirement may exist without implementation ownership.

CTO Review

Strengths

- Business-first rather than technology-first.
- Clear distinction between strategy and execution.
- Establishes governance and measurable success.
- Provides traceability from business requirement to implementation.

Improvements Planned for BRS v2

- Business process BPMN diagrams.
- Cost model and financial projections.
- Stakeholder communication matrix.
- Business capability maturity model.
- Requirement prioritization (MoSCoW).
- Regulatory and compliance considerations.

- Business continuity planning.
